

Exer - Torrance  
 2613 Pacific Coast Highway  
 Torrance, CA 90505  
 Phone: 424-625-0220

Name: <b>Kashiwao, Kotaro</b>	DOB: 12/22/2015	Sex: M
Acct #: df630627c0fb1a	MR #: #1d2a3b68a8645a3	AGE: 6
Visit Date: 01/07/2022 11:28	Bed #:	
Treating Provider: Frederick Levin MD		
Patient's PMD: Naoko Matsumoto 310-483-7880		

## TEST RESULTS

### RESULTS FROM OUTSIDE LAB STUDIES:

#### LAB SOURCE

Patient name: Kashiwao, Kotaro  
 Results from: Exer with Providence: EXER Urgent Care Address: 8985 Venice Blvd. STE A3B Culver City CA 90034  
 Medical Director: Dr. Don Xu, MD, Ph.D.  
 Ordered by: Adams, Wesley  
 Date of Report: 01/08/2022 10:09:25  
 Specimen ID: df630627c0fb1a  
 Date Ordered: 01/07/2022 11:55:00  
 Date Received: 01/07/2022 11:55:00  
 Report Status: CM

#### SARS-CoV-2

-- SARS-CoV-2 Negative (NL = Negative) F

The test performed at EXER-PCR laboratory for the SARS-CoV-2 identification is intended for the qualitative detection of nucleic acids from SARS-CoV-2 in nasopharyngeal or oropharyngeal swab samples (Nasal swabs acceptable) from patients who meet COVID-19 clinical and/or epidemiological criteria. Testing methodology is real-time RT-PCR. LumiraDx SARS-CoV-2 RNA STAR used here, has been designed to minimize the likelihood of false positive test results. However, in the case it happens the risks should be acknowledged. LumiraDx SARS-CoV-2 RNA STAR Complete has been designed to detect a region in ORF1a from nucleic acid sequences within the genome of the SARS-CoV-2 RNA. A negative test result for this test means that SARS-CoV-2 RNA was not present in the specimen above the limit of detection. However, a negative result does not rule out COVID-19 and should not be used as the sole basis for treatment or patient management decisions. A negative result does not exclude the possibility of COVID-19. When diagnostic testing is negative, the possibility of a false negative result should be considered in the context of a patient's recent exposures and the presence of clinical signs and symptoms consistent with COVID-19. The possibility of a false negative result should especially be considered if the patient's recent exposures or clinical presentation indicate that COVID-19 is likely, and diagnostic tests for other causes of illness (e.g., other respiratory illness) are negative. If COVID-19 is still suspected based on exposure history together with other clinical findings, re-testing should be considered by healthcare providers in consultation with public health authorities. Risks to a patient of a false negative include the following: delayed or lack of supportive treatment, lack of monitoring of infected individuals and their household or other close contacts for symptoms resulting in increased risk of spread of COVID-19 within the community, or other unintended adverse events. In general, test results must be correlated with clinical presentation and other laboratory data. Test performance can be affected by specimen type, collection time during the course of infection, and concentration of viral RNA. This test has received Emergency Authorization for use by FDA. The EUA for this test is supported by the Secretary of Health and Human Services (HHS's) declaration (under Section 564 (b) (1) of the Act, 21 U.S.C. section 360bbb-3(b) (1)). EXER-PCR Laboratory is CLIA certified laboratory. CLIA# 05D1082684, located in 8985 Venice Blvd. Culver City, CA 90034, under the directorship of Dr. Don Xu, MD, Ph.D. (Laboratory Director), Dr. K. McCabe, DO, FACEP (Clinical Consultant), and Dr. J. Kermani MSCLS; Ph.D. (Technical Supervisor).
