

## Your COVID-19 test result

# NEGATIVE

A negative result for this test means that SARS-CoV-2 RNA (the cause of COVID-19) was not detected in the collected sample.

### What does it mean to have a **negative** test result?

A negative test result does not completely rule out being infected with COVID-19.

If you test negative for COVID-19, this means the virus was not detected at the time your specimen was collected. It is still possible that you were very early in your infection at the time of your specimen collection and that you could test positive later.

Also, you could be exposed later and still develop the illness. For all these reasons, it is important to follow CDC guidance, including but not limited to frequent hand washing, social distancing, wearing a face covering, covering coughs and sneezes, monitoring symptoms, and cleaning and disinfectant of frequently touched surfaces - even after a negative test result.

### Test information

**Patient's name**

Madoka Fujimura

**Collection date**

August 24, 2021 at 11:30 AM PDT

**Patient's date of birth**

September 29, 2009

**Collection location**

2001 PACIFIC COAST HIGHWAY,  
LOMITA, CA 90717

**Test type**

SARS-COV-2 RNA, QL, RT PCR (COVID-19)

**Provider**

ALEGADO TRICIA

### MinuteClinic contact information

**Customer Service:** (866) 389-2727

## Your COVID-19 test result

# NEGATIVE

A negative result for this test means that SARS-CoV-2 RNA (the cause of COVID-19) was not detected in the collected sample.

### Legal Disclaimer

Negative: SARS-CoV-2 not detected Testing did not identify the presence of SARS-CoV-2 (the virus that causes COVID-19) in the patient's sample. Many factors can impact the sensitivity of this test, including variability in sample collection technique, stage of infection, or the presence of interfering substances. Collection of multiple samples may be necessary to detect the SARS-CoV-2 virus. If clinically indicated, consider collecting a new sample for COVID-19 testing or testing for other respiratory viruses. This test was developed for the detection of nucleic acids from the SARS-CoV-2 virus by RT-PCR in individuals who meet SARS-CoV-2 clinical and/or epidemiological criteria. This test has not been FDA cleared or approved. This test has been authorized by FDA under an EUA for use by the authorized laboratory. This test is only authorized for the duration of time that the Secretary of the HHS declares circumstances exist justifying the authorization of the emergency use of in vitro diagnostic tests for detection of SARS-CoV-2 virus and/or diagnosis of COVID-19 infection under section 564(b)(1) of the Act, 21 U.S.C. 360bbb-3(b)(1), unless the authorization is terminated or revoked sooner.
